LMA Supreme™ is a second generation, gastric access device which forms an effective First Seal™ with the oropharynx (oropharyngeal seal) and an innovative Second Seal™ with the upper oesophageal sphincter (the oesophageal seal).

- Soft, elongated cuff designed to support an effective First Seal™ and Second Seal™.1,2,3
- Elliptical and anatomically shaped LMA Evolution Curve™ (airway tube) facilitates insertion success.2
- Fixation tab and integral bite block.1

**First Seal™**

LMA Supreme™ delivers measured oropharyngeal leak pressures up to 37 cm H₂O.4

The First Seal™ is important for:
- Ventilation performance
- Advanced uses of the device such as in patients with decreased thoracic compliance, in mild-to-moderately obese patients and in certain procedures requiring mechanical ventilation where higher seal pressures are required

**Second Seal™**

LMA Supreme™ enables passive drainage or active management of digestive tract contents independent of ventilation.3

The Second Seal™ is designed to:
- Improve safety vs a first generation device
- Secure the distal tip of the LMA Supreme™ at the upper oesophageal sphincter to maintain the patency of the drain tube
- Reduce the risk of insufflation during ventilation
- Reduce the risk of regurgitated gastric content leaking around the tip of the mask

Consider using LMA Supreme™ for:
- Mild to moderately obese patients
- Abdominal procedures
- Controlled reflux
- Positive pressure ventilation (PPV)
- Unexpected difficult airways
- Plastic surgery procedures
